Managed Portfolio Service: Balanced

30 November 2023

Portfolio Management

The portfolio is managed through RBC Brewin Dolphin's network of investment professionals. The asset allocation team meets monthly to decide upon the top-down strategy for the portfolio. Strict adherence to its recommendations ensures profits are taken regularly and risk is kept within appropriate levels. The fund research team is mandated to provide the building blocks for the portfolio with all funds having been carefully analysed to identify fund managers who can sustain enhanced returns while diversifying risk.

Portfolio Information

Inception Date 31 October 2008

Market Commentary

November provided the best monthly equity returns (9%) since November 2020 (12%). One of the bigger headwinds for risk assets this year has been high interest rates. A sharp reduction in interest rate expectations has triggered a rally in invested assets and provided some relief to real estate stocks, which have had a torrid couple of years as interest rates threatened to squeeze profitability. In fact, the global real estate sector outperformed broad global stocks in November.

The other leading sector was technology, reflecting the traditional inverse relationship the sector has with bond yields, which serve as the discount rate for the long-term earnings growth these companies are assumed to offer. This correlation had been temporarily suspended earlier this year when yields were surging, and many tech stocks also performed well due to excitement about the profits they will reap from increased adoption of artificial intelligence. Chinese economic activity was better than expected but remains weak, according to the purchasing managers' indices. Beijing continues to lean into the housing downturn with selective measures. Last week, the authorities essentially said that the Chinese banking system was earning excessive profits and could stand to transfer some of those to the real economy. This kind of behaviour from firms, and the expectation of it from central government, is partly why similar firms operating in the US and China have seen very different investment outcomes.

Neither simulated nor actual past performance are reliable indicators of future performance. The value of investments and any income from them can fall and you may get back less than you invested. Investment values may increase or decrease as a result of currency fluctuations.
