Solution Description

The PIM Strategic Conviction solution adopts a Strategic approach to asset allocation and invests in active and passive funds. The amount invested into each asset class is dependent upon the clients' chosen risk grade and is rebalanced on a periodic basis. The investment manager has the ability to modify the asset weightings subject to strict volatility parameters.

The split between active and passive funds is determined by PIM using both quantitative and qualitative measures and may vary by asset class as deemed appropriate by the investment managers.

Benchmarks

Solution performance is compared against its composite benchmark, the UK CPI as a measure of inflation and the RTMA (where applicable) as a peer group of similar investment strategies.

For financial professionals only. Past performance is no indicator of future returns and investors could get back less than they put in. There is no guarantee the solution or funds will meet their objectives.

Important notes and Disclaimers

Past performance is no indicator of future returns. Investment in a multi-asset portfolio is not a suitable place for short term money and your clients may not get back what they put in. All investment carries risk and it is important both you and your clients understand this. The value of any investment in a multi-asset portfolio, and any income derived from it, as well as the effect of Exchange rate fluctuations, may cause the value of assets to rise or fall.

Parmenion performance history captures all fund switches, asset allocation changes and official quarterly rebalance dates. It does not take into account instances where it has been necessary to rebalance the overall portfolio as a result of changes made within one or more of the underlying asset classes, it also does not take account of the 2% allocation to cash for liquidity. There could be slight discrepancies between the performance figures shown here and that achieved in reality.

Parmenion does not charge an initial fee. The majority of the underlying funds do not charge an entry, but may apply a dilution levy from time to time or, in the case of property funds, charge Stamp Duty Land Tax upon investment into the fund.

The composite benchmark is built using our licenced indices for each asset class. The weighting assigned to each index is based on the asset allocation of the particular risk grade. Returns are gross of all fees.

The RTMA (Risk Targeted Multi Asset) benchmark sectors segment similar risk profiled multi asset funds into groups based on their underlying risk to enable a fair and reasonable comparative analysis of risk adjusted returns. The measurement of risk is based on FE risk score boundaries derived around relative volatility. Funds within each sector have historically delivered similar volatility to one another facilitating like for like comparisons.
