¹Historic annual yield. Source: Financial Express (FE).

Risk profile

Investment objectives

abrdrn Sustainable Index MPS 5 aims to generate growth primarily through the use of sustainable, ethical and impact index tracker funds over the long term. It is intended for investors with a medium high attitude to risk.

The diversified portfolio invests in a variety of assets, typically in equities, fixed interest, alternatives and money markets. This blend of assets should help to dampen down volatility over the long term.

Ratings

Cumulative performance (%)

Performance (%)

	1M	3M	6M	1Y	3Y	5Y	Since Inception	Volatility ²

Investment team

Our MPS portfolios are managed by a dedicated investment management team. The team has over 85 years' investment experience in fund selection, asset allocation and portfolio construction. At abrdn, we have a clearly defined investment policy and devote significant resources to making sure it's consistently delivered and continuously developed. We utilise our global, institutional investment capabilities and follow a rigorous process when building all the MPS portfolios within a robust governance and oversight framework.

Asset Allocation³

Sustainable investing

We've designed our multi-asset sustainable solution to help our clients tap into the benefits of sustainable investing, while incorporating environmental, social and governance (ESG), stewardship, avoiding harm and impact themes, and making a positive impact on the world. We do this by carefully selecting and rigorously monitoring a diverse mix of investments, built on 4 key pillars:

1. Environmental, Social and Governance (ESG) integration
2. Active Stewardship and Engagement
3. Avoiding harm
4. Doing measurable good via Impact investing strategies

The 4 pillars are used as a classification framework for portfolio holdings.

Important Information

This document is strictly for information purposes and should not be considered as an offer, investment recommendation or solicitation to deal in any of the investments mentioned herein. abrdn does not warrant the accuracy, adequacy or completeness of the information and materials contained in this document and expressly disclaim liability for errors or omissions in such information and materials.

No part of this document may be copied or duplicated in any form or by any means or redistributed without the written consent of abrdn.

This factsheet does not provide individually tailored advice. It has been prepared without regard to individual financial circumstances and objectives of persons who receive it. We recommend that investors seek the advice of a financial adviser. The appropriateness of a particular portfolio will depend on an investor's individual circumstances and objectives.

Investors should remember that the value of investments and the income from them can go down as well as up and that past performance is not a guarantee of future returns.

Performance

Portfolio performance is based on abrdn Sustainable Index MPS hosted on the abrdn Wrap platform. Portfolio constituents and performance may vary on other platforms. The portfolio has not been available on all platforms since inception. The performance figures may vary due to product specific charges and should be viewed on an indicative basis.

Performance figures are net of the abrdn Portfolio Solutions Ltd management fee and underlying funds OCF. However they do not include the deduction of product and adviser specific charges. The effect of these charges would be to reduce the performance levels shown. In addition, MPS portfolios are subject to fund level annual management charges, which vary over time in line with the composition of the portfolio. Please refer to the relevant Managed Portfolio Service Annual Charges Summary for more information on charges.

ARC Private client indices

ARC Private Client Indices are based on actual client portfolio returns provided by various investment management companies. These portfolio returns are allocated to one of four categories based on the volatility of their returns relative to world equities, and an average return is calculated for each category.

Grouping portfolios by their volatility differs from the traditional approach, which compares portfolios which have similar asset allocations. Instead, investment managers may use whatever asset allocation they consider appropriate to achieve the desired levels of return and volatility.
