Passive MPS 1

As at 30 November 2023

Investment objective

AJ Bell Passive MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Risk profile⁽¹⁾

For investors who wish to maintain their capital investments and are not able to tolerate larger short-term dips in the value of their portfolio that may arise from exposure to the stock market.

The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Investment approach

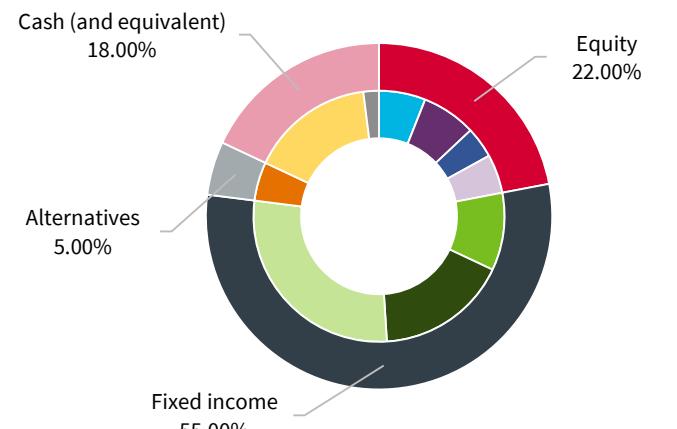

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products mainly hold typically lower risk assets such as cash and bonds, with smaller holdings in company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

(4) The above table shows the total return of the portfolio on a cumulative basis over the previous five years. This is taken from the most recent month end.

Source: Morningstar as at 30 November 2023.

Performance is calculated on a net of fees basis. Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Mixed Investment 0-35% Shares sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 August 2016.

Fees and charges

Ongoing charges figure (OCF)	0.28%
Transaction costs	0.04%
Total indicative charge	0.32%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Passive MPS, this is around £20,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility	4.20% - 6.30%
---------------------	---------------

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

(1) The AJ Bell Managed Portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/shares in a fund or portfolio.

Allocation and performance information contained in this document is representative of the standard Passive MPS 1 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation and performance.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Passive MPS 2

As at 30 November 2023

Investment objective

AJ Bell Passive MPS 2 aims to make an average return in line with inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Risk profile⁽¹⁾

For investors who can tolerate some shorter-term capital loss from their portfolio, as markets fluctuate.

The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Investment approach

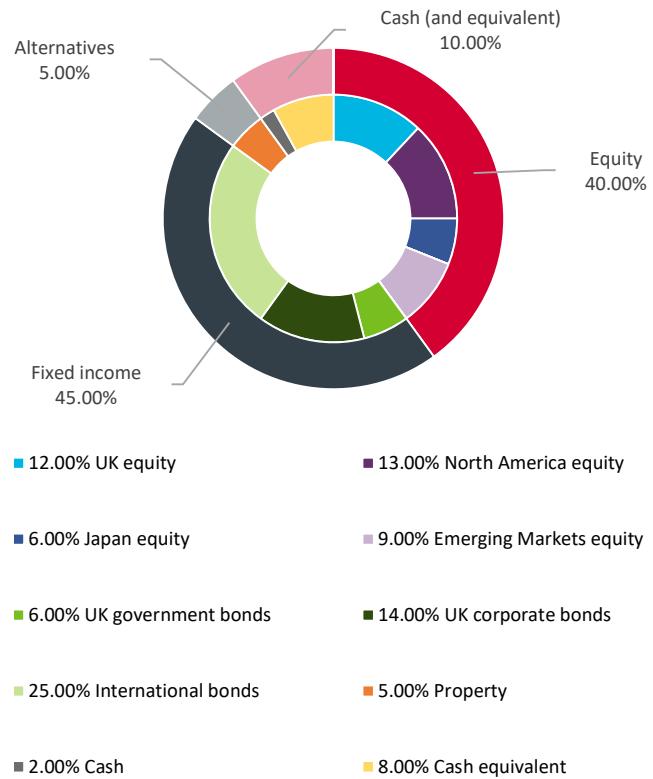

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Passive MPS 5

As at 30 November 2023

Investment objective

AJ Bell Passive MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets.

Risk profile⁽¹⁾

For investors who understand the risk and reward relationship of pure equity portfolios over the short, medium and long term. The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Investment approach

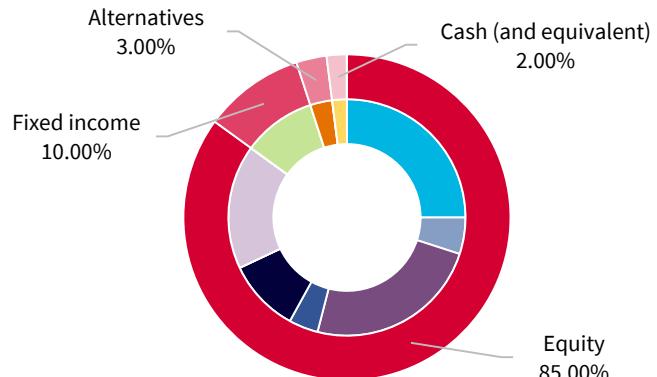

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Source: Morningstar as at 30 November 2023.

Performance is calculated on a net of fees basis. Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Flexible Investment sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 August 2016.

Fees and charges

Ongoing charges figure (OCF)	0.28%
Transaction costs	0.06%
Total indicative charge	0.34%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Passive MPS, this is around £20,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility	12.60% - 14.70%
---------------------	-----------------

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

(1) The AJ Bell Managed Portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information on our risk profilers. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/shares in a fund or portfolio.

Allocation and performance information contained in this document is representative of the standard Passive MPS 5 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation and performance.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Passive MPS 6

As at 30 November 2023

Investment objective

AJ Bell Passive MPS 6 aims to make an average return substantially ahead of inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets and high growth companies.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

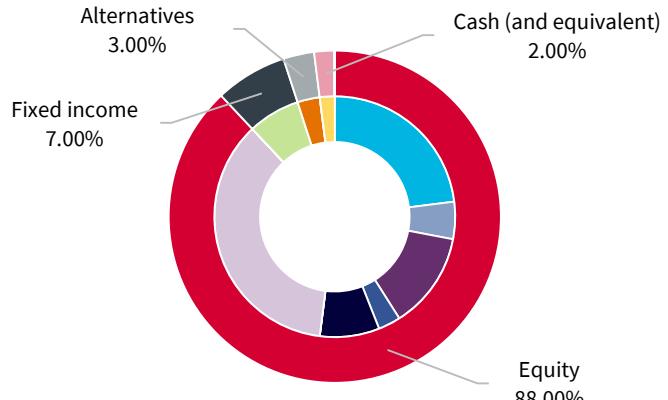

Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Risk profile⁽¹⁾

For investors who understand the risk and reward relationship of pure equity portfolios over the short, medium and long term. The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Asset allocation⁽²⁾

Passive Income MPS 1

As at 30 November 2023

Investment objective

AJ Bell Passive MPS Income 1 aims to minimise the risk of losing value, whilst delivering a sustainable income when measured over a period of at least five years.

Over shorter periods the portfolio may lose value, including sharp falls in certain market conditions, as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

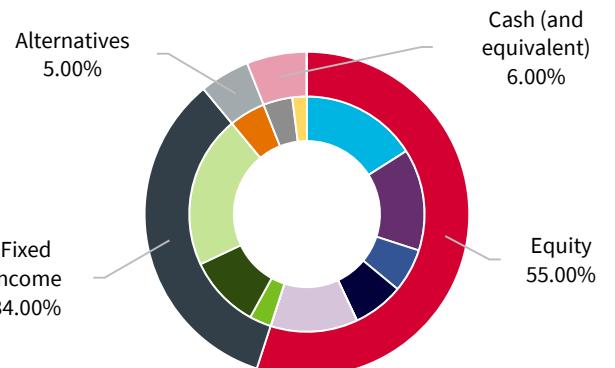

To deliver income the portfolio invests in a wide range of income focused index strategies. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Risk profile⁽¹⁾

For investors who understand the risk and reward relationship of pure equity portfolios over the short, medium and long term. The portfolio invests in funds and exchange traded funds (ETFs), using a risk-based strategic asset allocation process to deliver returns.

Active MPS 1

As at 30 November 2023

Investment objective

AJ Bell Active MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products mainly hold typically lower risk assets such as cash and bonds, with smaller holdings in company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

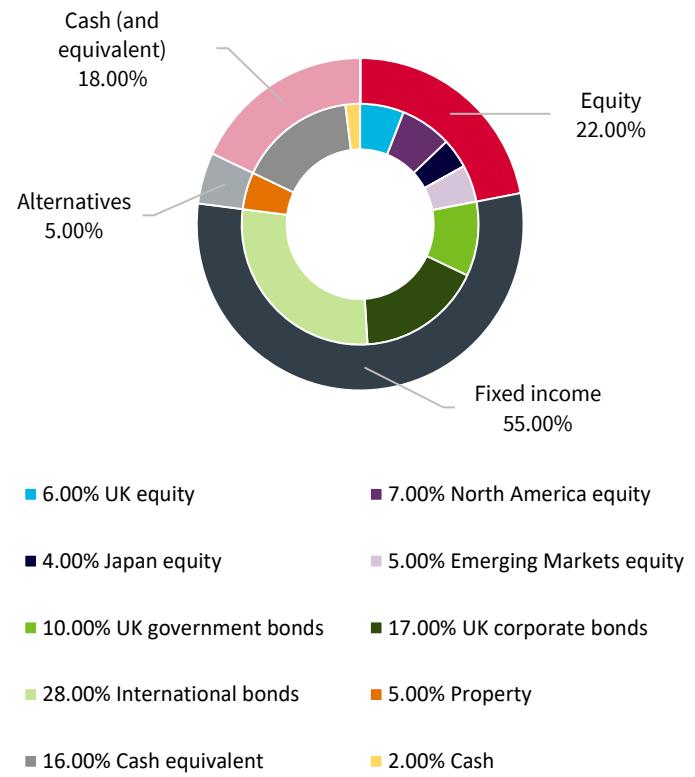

Risk profile⁽¹⁾

For investors who wish to maintain their capital investments and are not able to tolerate larger short-term dips in the value of their portfolio that may arise from exposure to the stock market.

The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Total indicative charge	0.66%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Active MPS, this is around £10,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility 4.20% - 6.30%
Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

(1) The AJ Bell Managed Portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information on our risk profilers. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/shares in a fund or portfolio.

Allocation and performance information contained in this document is representative of the standard Active MPS 1 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation and performance.

Active MPS 2

As at 30 November 2023

Investment objective

AJ Bell Active MPS 2 aims to make an average return in line with inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Risk profile⁽¹⁾

For investors who can tolerate some shorter-term capital loss from their portfolio, as markets fluctuate.

The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Source: Morningstar as at 30 November 2023.

Performance is calculated on a net of fees basis. Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Mixed Investment 20-60% Shares sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 19 February 2018.

Active MPS 5

As at 30 November 2023

Investment objective

AJ Bell Active MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

Active MPS 6

As at 30 November 2023

Investment objective

AJ Bell Active MPS 6 aims to make an average return substantially ahead of inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets and high growth companies.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Risk profile⁽¹⁾

For investors who understand the risk and reward relationship of pure equity portfolios over the short, medium and long term. The portfolio invests in funds and exchange traded funds (ETFs), using defined strategic asset allocation to deliver returns while meeting the targeted level of risk.

Source: Morningstar as at 30 November 2023.

Performance is calculated on a net of fees basis. Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Flexible Investment sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 19 February 2018.

Fees and charges

Ongoing charges figure (OCF)	0.91%
Transaction costs	0.20%
Total indicative charge	1.11%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Active MPS, this is around £10,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility 14.70% - 16.80%

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

(4) The above table shows the total return of the portfolio on a cumulative basis over the previous four years. This is taken from the most recent month end.

Source: Morningstar as at 30 November 2023.

Performance is calculated on a net of fees basis. Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Mixed Investment 20-60% Shares sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 February 2019.

Fees and charges

Ongoing charges figure (OCF)	0.56%
Transaction costs	0.10%
Total indicative charge	0.66%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Pactive MPS, this is around £20,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility	6.30% - 8.40%
---------------------	---------------

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

(1) The AJ Bell Managed Portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information on our risk profilers. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/shares in a fund or portfolio.

Allocation and performance information contained in this document is representative of the standard Pactive MPS 2 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation and performance.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Pactive MPS 3

As at 30 November 2023

Investment objective

AJ Bell Pactive MPS 3 aims to make an average return at least in line with the level of inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may lose value, including sharp falls in certain market conditions, as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Pactive MPS 5

As at 30 November 2023

Investment objective

AJ Bell Pactive MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk.

(4) The above table shows the total return of the portfolio on a cumulative basis over the previous four years. This is taken from the most recent month end.

Source: Morningstar as at 30 November 2023.

Performance is calculated on a net of fees basis. Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Flexible Investment sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 February 2019.

Fees and charges

Ongoing charges figure (OCF)	0.68%
Transaction costs	0.13%
Total indicative charge	0.81%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Pactive MPS, this is around £20,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility

14.70% - 16.80%

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

(1) The AJ Bell Managed Portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information on our risk profilers. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/shares in a fund or portfolio.

Allocation and performance information contained in this document is representative of the standard Pactive MPS 6 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation and performance.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Responsible MPS 1

As at 30 November 2023

Investment objective

AJ Bell Responsible MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products mainly hold typically lower risk assets such as cash and bonds, with smaller holdings in company shares. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the VT AJ Bell Responsible Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

However, to give context and enable an objective assessment of the portfolio's performance, the IA (Investment Association) Mixed Investment 40-85% Shares sector average is included for reference. The portfolio does not aim to track the IA sector as a benchmark.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 01 March 2021.

Fees and charges

Ongoing charges figure (OCF)	0.41%
Transaction costs	0.09%
Total indicative charge	0.51%

Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Responsible MPS, this is around £20,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility	10.50% - 12.60%
---------------------	-----------------

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

Allocation and performance information contained in this document is representative of the standard Responsible MPS 4 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation and performance.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Where practical the Responsible portfolios invest in products tracking MSCI Socially Responsible Investing (SRI) indexes for equity exposure. These indexes exclude companies with certain controversial business involvements and also utilise MSCI's Environmental Social Governance (ESG) ratings and ESG Controversy assessments. For further details please see MSCI's latest SRI Indexes Methodology document.

Responsible MPS 5

As at 30 November 2023

Investment objective

AJ Bell Responsible MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products mainly invest in company shares, with small holdings in bonds from both companies and emerging market governments. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI.

The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the VT AJ Bell Responsible Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Money Market MPS

As at 30 November 2023

Investment objective

The AJ Bell Money Market MPS aims to hold investments which deliver a cash-like return to investors. The portfolio will have a preference towards cash-like assets such as cash, money market funds and ultra-short-dated bond funds, with no exposure to higher-risk assets such as shares.

Risk profile⁽¹⁾

For investors who wish to maintain their capital investments and are not able to tolerate larger dips in the value of their portfolio that may arise from exposure to markets. The portfolio invests in funds and exchange traded funds (ETFs), that are of very low risk

Investment approach

Investments that deliver a 'cash-like' return profile will typically invest in a range of lower risk investments such as overnight deposits, short term government bonds and also short dated bonds issued by companies. There is a surprisingly wide range of differing strategies investing in this way and therefore the AJ Bell investments team look to blend differing strategies together to build a well-diversified portfolio. The portfolio is designed to ensure there is always a minimum of four underlying strategies to ensure the portfolio is always spread across a wide variety of underlying issuers.

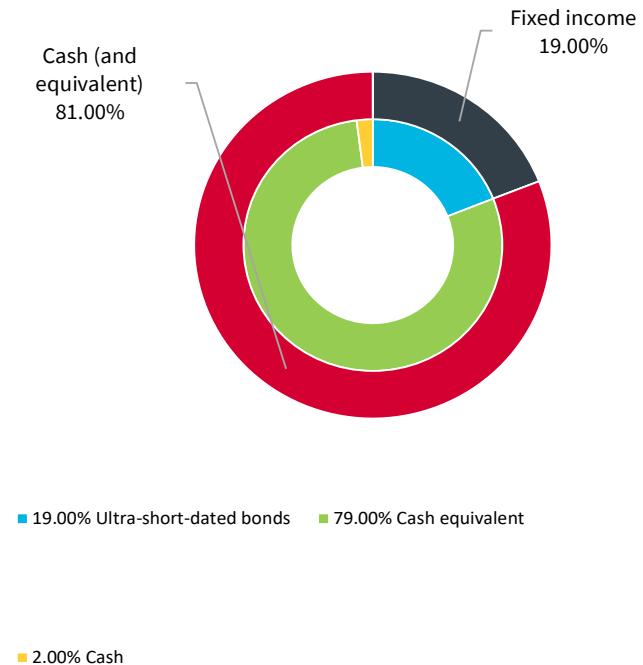

In addition to dedicated money market funds, the portfolio can invest up to 20% in ultrashort-dated bond funds or ETFs. Ultrashort-dated bond funds are defined as funds that have less than one year to maturity on average, and can help bring additional diversification to the portfolio without taking excessive additional risk. The portfolio has strict controls on the amount of duration that can be taken to ensure the portfolio delivers cash-like returns for investors.

Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate

Holdings (weight %)

BlackRock Institutional Sterling Liquidity	30.00
BlackRock Institutional Sterling Government Liquidity	30.00
Royal London Short Term Money Market	19.00
iShares £ Ultrashort Bond ETF	19.00
Cash	2.00

Asset allocation⁽¹⁾

(1) Based on target weights at portfolio rebalance.

Performance (2)

(2) Insufficient historic performance data is available as the portfolios were launched less than 12 months ago.

This model was launched on 22 November 2023.

The recommended holding period for this portfolio is a minimum of three months.

Fees and charges

Ongoing charges figure (OCF)	0.10%
Transaction costs	0.01%
Total indicative charge	0.11%

Ongoing Charges Figure (OCF) comprises of the ongoing charges of underlying investments, there is no AJ Bell Investments Annual Management Charge for the Money Market MPS. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance.

There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For the Money Market MPS, this is around £10,000. It should be noted that the smaller the investment amount, the greater the impact of transaction costs will be on the investment.

Subject to regulatory requirements, the portfolio will normally remain fully invested. There is, however, no restriction on the underlying content of the investments held in terms of investment type and geographical or economic sector (other than those imposed by the regulations). This means that AJ Bell Investments can, at its own discretion, weight the portfolio towards any investment type or sector, including cash, at any time. For further details of all applicable costs, please speak to your financial adviser or visit www.investcentre.co.uk.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.
